We are now going to add images to our flight boards.

Google and download two airport related images.

Copy and paste the images in to the static folder.

Copy the following code once on top of your h1 tag and once beneath it.

**Remember to replace 'plane.jfif' with the name of your images.

```
<div class="column"><img src="{{ url_for('static',filename='plane.jfif') }}"
alt="" width="100" height="100"></div>
```
